

ClearCut

IT TRAINING

Excel Advanced

This takes the skills learned in the two previous courses and moves on to look at some Excels more advanced tools. It is particularly suited to those who use Excel as a means of modelling data to find solution to problems.

Key Topics

- How to use scenarios
- How to use the solver tool
- Using spreadsheet auditing facilities
- Creating conditional formats
- Using data validation
- Using the data analysis tools
- Saving Excel templates
- Introduction to creating and running macros.
