

Duration: 1 day

Delegates for this course should have some experience of using HTML. The ideal candidate would be someone who uses HTML but needs to gain a better understanding of CSS. This course teaches CSS from the basics and is designed to complement our HTML course.

Key Topics

- The relationship between HTML and CSS
- Understanding browser issues and working with Doctype
- What can CSS do and understanding the meaning of Cascading
- Basic CSS syntax
- Understanding Style, Class, ID and Tag
- Understanding working in blocks and working inline
- How CSS applies to HTML elements such as headings, lists, paragraphs, forms, and tables
- Working with the DIV tag
- Understanding font, font size, and colour
- How text formatting works using CSS
- How to create backgrounds
- An introduction to laying out a page using CSS
