

Duration: 1 day

Dreamweaver is a popular tool for building and designing websites. This course focuses not on the languages involved in designing a website, but on getting the most out of Dreamweaver's many options. Although looking at some web design is inevitable in this course, you should be prepared instead for a solid look at why Dreamweaver is one of the best website design tools available.

Key Topics

- Introduction to the Dreamweaver user interface
- Creating a local site
- Setting up synchronisation in Dreamweaver
- Connecting to and working with a source code control system (Git)
- Creating an HTML page
- Using a CSS starter
- Using the property inspector
- Introduction to building web site navigation
- Using graphics and other media in Dreamweaver
- Introduction to building web page layouts in Dreamweaver
- Using templates and libraries
- Connecting to a remote site and testing your site
