PL7008: Create Agents in Microsoft Copilot Studio

ClearCut IT TRAINING

Duration: 1 day

Learn how to create, customise, manage, and deploy AI-powered agents using Microsoft Copilot Studio. The course combines guided learning with practical exercises that develop the skills needed to build useful workplace agents.

Who should attend?

This course is suitable for Microsoft Power Platform users and others who want to learn how to create custom agents with Microsoft Copilot Studio.

Course Prerequisites

Familiarity with Microsoft Copilot Studio is recommended.

Course objectives

- Get started with Microsoft Copilot Studio.
- Design agent conversations using topics.
- Build intelligent agents using knowledge and generative answers.
- Add structured automation and workflow tools to agents.
- Test, publish and analyse an agent.

Topics

- Environments, agents and the Copilot Studio interface.
- Topics, conversation nodes, entities, and variables.
- Knowledge-enabled agents and generative answers.
- Copilot Studio workflows and Power Automate actions.
- Testing, publishing and performance analysis.
